WHAT TO DESIGN?

- Need to take into account:
 - Who the users are
 - What activities are being carried out
 - Where the interaction is taking place
- Need to optimize the interactions users have with a product such that they match the users' activities and needs.

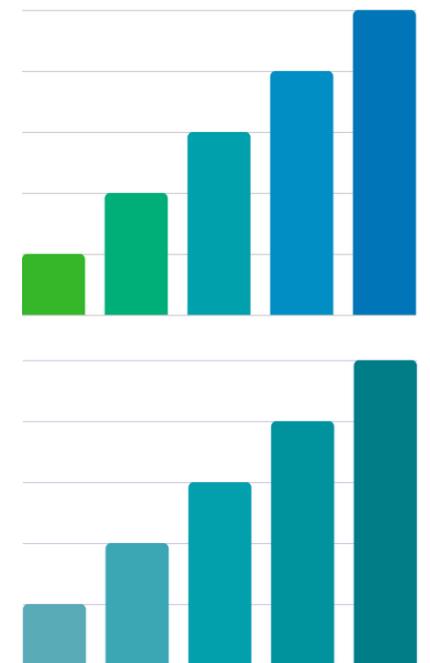

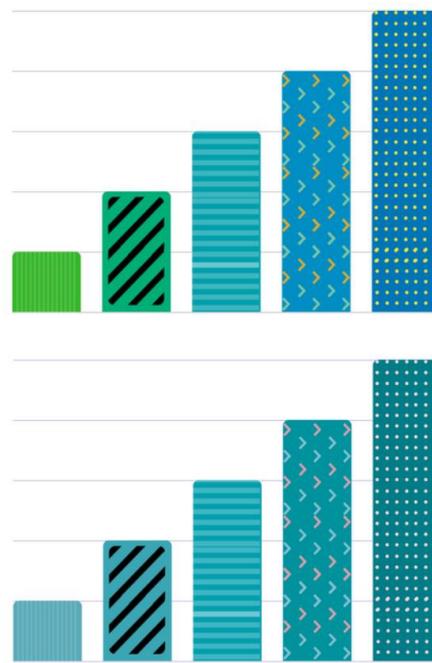

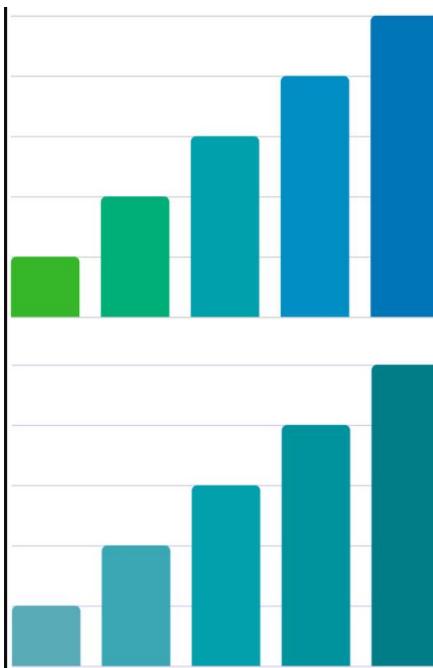

UNDERSTANDING USERS' NEEDS

- Need to take into account what people are good and bad at
- Consider what might help people in the way they currently do things
- Listen to what people want and get them involved
- User tried and tested user-based methods.

4. UNDERLINE LINKS

After a CNN inquiry found ten tweets from Alex Jones' accounts that it felt should've qualified as breaking Twitter's rules, the service admitted late Friday that it agreed on seven of them. The tweets have been deleted, and CNN reports that on his Infowars show, Jones directed his staff to remove them to "take the super high road." (Meanwhile, these greatest hits are all still live.) All of this comes days after Twitter declined to follow the actions taken by Apple Podcasts, Facebook, YouTube and others to ban the channel, claiming it hadn't violated their rules.

Now, even though it admits that is not the case, Twitter said that it would've asked for the offending tweets to be deleted, and that has already happened. Apparently only two of them were recent enough to be considered for it to cite them in punitive action, while the other five occurred before the new rules implemented in December 2017.
